### **Type 2033/3235 Tank bottom valve**

The new Bürkert 3235 tank bottom valve can be hand operated with a PPS or Stainless Steel wheel. Options are a lock feature and fully polished wheel and bonnet matching the Stainless Steel body. The 2033 is an actuated version of the 3235.

For the Food and Beverage industry or Pharmaceutical market; the body can be finished with a surface quality up to 0.25µm and the diaphragm can be certified to USP Class VI. On/off actuation can be performed locally with our range of pilot valves or on/off control head 1066/8631 with feedback and bus communication capabilities (optional).

The alternate method of actuation is from a remote location using our AirLINE system.

A top (8630) or side (1067/8635) controller can be fitted to the valve as well.

Please contact Bürkert at 1300 888 868 for the best solution.
