Diaphragm Certification USP Class VI

Bürkert is pleased to announce that the Manual, Actuated on/off and Controlled Diaphragm Valve range is available with our USP 28 Class VI Pharmacopoeia approved diaphragms.

These diaphragms can be used on our In-line, Tank-bottom, T-port, Tandem and customised-solution diaphragm valves, actuated as well as manually operated. (Series 203x, 2731 and 323x)

The various bodies are available with very high surface quality up to $Ra < 0.25\mu m$. These products are also compliant with the FDA standards 21CFR part 58.

The valves can be actuated and controlled locally or remote using our AirLINE bus-system.
